

ADVANTAGES

- High mechanical strength according to robust design
- Optimised filter life
- Durable synthetic filter media with various coatings or membranes
- Suitable for high dust loads
- Best separation efficiency
- Efficient filter cleaning due to flow-optimised filter head

Application	Camfil´s filter plates for the MF dust extraction systems are applicable to extract inorganic and organic dusts as well as oxides and aerosols (fumes) from different applications like: laser and plasma cutting, welding, surface treatment, metal machining, pharmaceutical and chemical manufacturing processes.
Media	Synthetic
Comment	Filter plates with Dura-Pleat media is available with various properties like oleophobic & hydrophobic, antistatic, PTFE membrane, oleophobic & antistatic, antistatic aluminium coated & PTFE membrane, anti-static carbon impregnation & PTFE membrane. Camfil´s dust collection filter medias are all tested to meet with European dust filter standard EN 60335-2-69 dust Class M.
